

**TECTONOTHERMAL HISTORY OF THE GRANULITES
AND GNEISSES AROUND PHULBANI, ODISHA, INDIA AND
ITS BEARING ON THE EVOLUTION OF THE
PROTEROZOIC EASTERN GHATS BELT**

Thesis submitted for the Degree of Doctor of

Philosophy (Science) in Geology

by

PROLOY GANGULY

**Department of Geology
Presidency University, Kolkata**

2018

CERTIFICATE FROM THE SUPERVISOR

This is to certify that the thesis entitled '*Tectonothermal history of the granulites and gneisses around Phulbani, Odisha, India and its bearing on the evolution of the Proterozoic Eastern Ghats Belt*' submitted by **Sri Proloy Ganguly**, who got his name registered on 16th March, 2015 for award of **Ph.D. (Science)** degree of Presidency University, is absolutely based upon his own work under the supervision of **Prof. Sankar Bose** and that neither this thesis nor any part of it has been submitted for either any degree/diploma or any other academic award anywhere before.

 11/10/2018

(Signature of the Supervisor with date and official seal)

Dr. Sankar Bose
Professor
Department of Geology
Presidency University, Kolkata

This thesis is dedicated to my parents
For their endless support and encouragement

ACKNOWLEDGEMENT

Firstly, I would like to express my sincere gratitude to my supervisor Prof. Sankar Bose for the continuous support of my Ph.D study and related research, for his patience, motivation, and immense knowledge. His guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better supervisor for my Ph.D study. I am also grateful to Prof. Gautam Ghosh whose guidance during the field work improved my knowledge in structural geology. I would like to thank Department of Geology, Presidency University for providing me institutional facilities for carrying out the research work. I wish to express my sincerest gratitude to Dr. Kaushik Das, Associate Professor, Department of Earth and Planetary System Sciences, Hiroshima University for his support during EBSD and SHRIMP analyses at Department of Earth and Planetary System Sciences, Hiroshima University.

I will also thank all my fellow research mates and the M.Sc students of 2015-2017 of Department of Geology, Presidency University for their support during field work. A special thanks to Aparupa Banerjee for motivating me all the time and standing beside me in every situation. I wish to thank my parents who encouraged me to take Geology as Honours subject after passing the Higher Secondary examination. I am also indebted to Dr. Nilanjana Sorcar for giving me thoughtful opinions regarding phase diagram modeling. I want to acknowledge Dr. Amitava Chatterjee for his help during zircon and monazite analysis at Hiroshima University. I am also thankful to Jagannath Da for his support in various aspects.

I would like to express my gratitude towards UGC, Govt. of India for fellowship support and Hiroshima University, Japan for providing fellowship during my brief stay at Japan.

And last but not least, I would like to thank Gosthipati sir who first taught me how to study thin sections under microscope.

List of Figures

- 1.1** Temperature-time plots for thermal excursion into the UHT regime.
- 1.2** Plot of thermal gradient versus age of peak metamorphism for different types of metamorphic belts coinciding with formation of the supercontinents.
- 1.3** Temperature-time plots showing different stages of zircon growth.

- 2.1** Geological map of the India showing the distribution of Precambrian cratons, mobile belts and sedimentary basins.
- 2.2** Lithological subdivisions of the EGB.
- 2.3** Isotopic and domain-based subdivisions of the EGB.
- 2.4** Generalized map of the EGB with the study area and the major shear zones marked on it.

- 3.1** Field photographs with outcrop-scale features present at the study area.

- 4.1** Lithological map of the study area marked with different structural elements.
- 4.2** Field photographs showing the salient outcrop-scale structural features present at the study area.
- 4.3–4.4** Detailed geological maps of some selected areas to show the structural characters of the litho-units.

4.5 Field photographs showing structural features present at Ranipathar shear zone (RSZ).

5.1 Photomicrographs and BSE images of the aluminous granulite and migmatitic felsic gneiss.

5.2–5.3 Phase diagrams of the aluminous granulite showing the metamorphic evolution of this rock.

6.1 Photomicrographs and BSE images of the associated rocks.

6.2 Phase diagrams of calc-silicate granulite at different O_2 levels.

6.3 Photomicrographs, BSE images and X-ray maps of the textures of the contact of Calc-silicate granulite and coarse-grained charnockite and the pegmatoidal metasomatic rock.

7.1 Geological map of the study area marked by sample locations for EBSD analyses.

7.2 Photomicrographs of the rocks exposed at the N-S trending ductile shear zone.

7.3 Photomicrographs of the rocks exposed at the RSZ.

7.4 Results of the microstructural data obtained by EBSD analyses.

8.1 Photomicrographs showing different types of fluid inclusions present in the studied rocks.

8.2 Lithological map with sample locations for fluid inclusion analyses.

8.3 Photomicrographs of the fluid inclusions which were examined by microthermometric method and Raman spectroscopy.

8.4 Diagrams presenting the ranges of the melting and homogenization temperatures of the analysed fluid inclusions.

8.5 Calculated isochores of the analysed fluid inclusions.

8.6–8.7 Fluid induced textures in monazite and feldspar grains.

9.1–9.2 Geological maps of the study area showing sample locations for geochronological analyses.

9.3 Photomicrographs and BSE images of the rocks which were used for geochronological analyses.

9.4 CL-images of the analyzed zircon grains.

9.5 Wetherill plots of the zircon U-Pb data obtained by SHRIMP.

9.6 BSE images, Photomicrographs, X-ray maps and U-Th-total Pb chemical age data obtained from the analyzed monazite grains.

- 10.1** Relative probability plots of the data from zircon and monazite grains.
- 10.2** P-T history of the aluminous granulite and the associated rocks of the Phulbani domain.
- 10.3** Block diagrams showing the structural evolution of the Phulbani domain.
- 10.4** Summarized tectonometamorphic and tectonothermal histories of the Provinces and domains present in EGB.
- 10.5** Schematic diagrams showing the tectonic evolution of Visakhapatnam and Phulbani domains.
- 10.6** Reconstruction of India and East Antarctica during the formation of Rodinia.
- 10.7** Tectonometamorphic and tectonothermal histories of Eastern Ghats Province and Rayner complex during Rayner-Eastern Ghats orogeny.

List of Tables

2.1 Tectonometamorphic and tectonothermal histories of the Provinces and the domains present in EGB.

5.1 Representative mineral compositions in the aluminous granulite and the migmatitic felsic gneiss.

5.2 Mineral assemblages, key textural features and the reactions among the mineral phases of the aluminous granulite and the migmatitic felsic gneiss.

5.3 Geothermobarometric estimations from the observed mineral assemblages and analyzed chemical data.

6.1 Representative mineral compositions of the associated rocks.

6.2 Textural characters of the associated rocks.

6.3 Geothermobarometric estimations from the observed mineral assemblages and analyzed chemical data.

8.1 Results of microthermometry on fluid inclusions in different samples.

9.1 Petrological characters of the samples used during geochronological analyses.

9.2 Ion microprobe data of the analyzed zircons from the samples of the Phulbani domain.

9.3 Electron microprobe data of analyzed monazite grains from the samples of the Phulbani domain.

9.4 Summary of the timings of the geological events inferred from geochronological data.
