Acknowledgements

Writing this thesis has been fascinating and extremely rewarding for me.

First and foremost, I would take this opportunity to express my deepest gratitude to my teacher Professor Bijan Das, for guiding me to bring the thesis in its present shape. I cannot express enough how grateful I am for his esteemed guidance, encouragement, patience, and support.

I convey my deep sense of gratitude to all the faculty members of our department, and also to the administrative and technical staff members of our University, because they have been kind enough to advise and help in their respective roles.

I deeply thank my fellow lab-mates for creating a friendly, pleasant, and innovative working atmosphere in our group. I have really enjoyed the time of my stay in the lab.

Financial assistance by Science & Engineering Research Board, Department of Science and Technology, New Delhi, Government of India and Presidency University to pursue doctoral studies is gratefully acknowledged.

All my achievements are dedicated to my parents, Mrinal Kanti Ray and Manosi Ray, who have never stopped supporting me. Their pride and expectation are the motivation of my effort.

This work would not have been possible without the help and support of many people, whom I owe a great debt of gratitude.

Dhiman Ray
