

DECLARATION

I hereby declare that this thesis titled '**Tectono-metamorphic and geochronological evolution of the Rengali Province in the Riamal-Rengali-Khamar sector, Odisha, India**' contains original research work that had been carried out by me under the able guidance and supervision of Professor Sankar Bose and Professor Gautam Ghosh, both from the Department of Geology, Presidency University, Kolkata, for the fulfilment of Ph.D. degree.

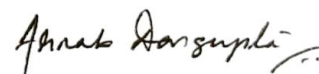

All data, experiments, analysis and information in this thesis has been obtained and presented in accordance with academic rules and ethical conduct.

I also declare that, as required by these rules and conduct, I have fully cited and referred all works and results that are not original to this work.

I also declare that this work has not been submitted previously for any degree either in part or in full to any other institute or University before.

KOLKATA

CERTIFICATE FROM THE SUPERVISORS

This is to certify that the thesis entitled '*Tectono-metamorphic and geochronological evolution of the Rengali Province in the Riamal-Rengali-Khamar sector, Odisha, India*' submitted by **Sri Arnab Dasgupta**, who got his name registered on **16th March, 2015** for award of **Ph.D. (Science)** degree of Presidency University, is absolutely based upon his own work under the supervision of **Prof. Sankar Bose** and **Prof. Gautam Ghosh** and that neither this thesis nor any part of it has been submitted for either any degree/diploma or any other academic award anywhere before.

(i).....

(ii).....

(Signature of the Supervisor(s) with date and official seal)

Dr. Sankar Bose
Professor
Department of Geology
Presidency University, Kolkata

Dr. Gautam Ghosh
Professor
Department of Geology
Presidency University, Kolkata

ACKNOWLEDGEMENT

First of all, I would like to thank Prof. Sankar Bose and Prof. Gautam Ghosh under whose supervision I completed my thesis. Without their continuous support and motivation, this thesis would never be possible. I am highly indebted to them for their support and guidance. I would like to thank Department of Geology, Presidency University for providing me institutional facilities for carrying out the research work. I wish to express my sincerest gratitude to Dr. Kaushik Das, Associate Professor, Department of Earth and Planetary System Sciences, Hiroshima University for all the support, invaluable inputs and guidance in handling high-end equipments during hour-long discussion sessions and also as a local guardian during my brief stay at Hiroshima University, Japan. I am also indebted to Prof. Hiroshi Hidaka, Nagoya University, Japan for allowing me to use the SHRIMP-II facility at Department of Earth and Planetary System Sciences, Hiroshima University. I would like to thank Dr. Yasutaka Hayasaka, Associate Professor, Department of Earth and Planetary System Sciences, Hiroshima University, for analysis of the samples in LA-ICP-MS and Kosuke Kimura for his help in geochronological sample selection, separation, preparation and analysis sessions and various other inputs. I am also grateful to Dr. David R. Nelson for his invaluable inputs in U-Pb zircon SHRIMP data interpretation.

I would also like to thank my parents for their continuous support and motivation during the entire tenure of my doctoral program. I will also thank all my fellow research mates at Department of Geology, Presidency University for their support. A special thanks to Saptarshi Mullick and Somdeb Dutta Mal (Research Fellows, Presidency University) for their cooperation during extensive fieldwork and helping me in preparing the geological map of the study area and Sneha Mukherjee, Senior Research Fellow for her help in sample analysis.

I would like to express my gratitude towards CSIR, Govt. of India and UGC, Govt. of India for their fellowship support, DST, Govt. of India and JSPS, Govt. of Japan for allowing me to travel to Hiroshima University as a member of DST-JSPS Bilateral Program. I would also like to thank Sri Abhijit Sarkar, Officer-in-Charge, Govt. General Degree College, Manbazar-II, Purulia and Department of Higher Education, Science & Technology and Biotechnology, Govt. of West Bengal for all the support and cooperation.

List of Figures *(All the figures are attached at the end of respective chapters)*

- 1.1 Models for growth of continental crust through time.
- 2.1 Geological map of Singhbhum Craton.
- 2.2 Geological map of Bastar Craton.
- 2.3 Geological map of Eastern Ghats Belt, showing :
 - a. The divisions on the basis of lithological characters.
 - b. The divisions on the basis of isotopic characters (Nd model ages).
 - c. The divisions on the basis of lithological, metamorphic and isotopic characters.
- 2.4 Geological map of Rengali Province.
- 3.1 Detailed Geological map of central part of the Rengali Province, showing main lithological units in the study area.
- 3.2-3.14 Field photographs showing outcrop scale features present within different high-grade rocks of Central Gneissic Belt.
- 3.15-3.31 Field photographs showing outcrop scale features within the low-grade supracrustal rocks that surround the Central Gneissic Belt.
- 4.1 Detailed geological map of central part of Rengali Province, showing the regional scale deformational features as well as equal area lower hemisphere plot of the structural data acquired from different lithological belts.
- 4.2-4.5 Field photographs showing macroscopic structure as well as deformational features present within different litho units of Kerajang Fault Zone.
- 4.6 Detailed map of Tikra nullah section.
- 4.7-4.10 Field photographs showing macroscopic structure as well as deformational features present within different litho units of Southern Supracrustal Belt.
- 4.11-4.23 Field photographs showing macroscopic structure as well as deformational features present within different litho units of the high-grade Central Gneissic Belt.

- 4.24 Detailed map of Brahmani river bed section near Rengali reservoir.
- 4.25-4.34 Field photographs showing macroscopic structure and deformational features present within different litho units of the Northern Supracrustal Belt.
- 5.1-5.28 Photomicrographs and BSE images of the thin sections of high and low-grade samples of the study area.
- 5.29 P-T pseudosections and modal isopleths constructed at calculated bulk compositions from representative studied samples to demonstrate P-T evolution of mafic granulite (a,b) and amphibolite (c,d).
- 6.1 Plot of all the high grade of the Central Gneissic Belts in Total alkali vs. silica diagram, according to their major element geochemistry.
- 6.2 Plot of charnockite and gneissic samples of the Central Gneissic Belts in geochemical classification diagram of Frost et. al., 2001.
- 6.3 Multi-element bivariate plot of charnockite and gneissic samples of the Central Gneissic Belts.
- 6.4 Plot of charnockite and gneissic samples of the Central Gneissic Belts in tectonic discrimination diagrams of Pearce et. al., 1984.
- 6.5 Plot of charnockite and gneissic samples of the Central Gneissic Belts in triangular plot proposed by Eby (1992) to distinguish between different A-type granites.
- 6.6 Plot of mafic samples of the Central Gneissic Belts in a tectonic discrimination diagram proposed by Pearce and Norry (1979).
- 6.7 Chondrite normalized spider diagram plot charnockite and gneissic samples of the Central Gneissic Belts.

- 7.1 Map of the studied area showing the exact location of the samples collected and analysed for geochronology.
- 7.2-7.6 Weatherill diagram and spot ages of the analysed zircons from the studied samples. Inset, probability-density curve of the analysed samples showing the $^{207}\text{Pb}/^{206}\text{Pb}$ ages and BSE images of analysed zircon samples.
- 7.7 Un-mixing of age diagram for the monazites analysed for fibrolite schist sample.
- 7.8 Probability-density curve of the analysed monazite spot ages of a leucogranite sample.
- 7.9 Probability-density curve for the analysed zircon of all the high-grade rock samples from the study area.
- 8.1 Schematic diagram showing the possible tectonic evolutionary model of the central part of Rengali Province.
- 8.2 A cartoon block model showing the possible kinematics that results in juxtaposition of deep crust with supracrustal at the central part of RP.
- 8.3 A comparative diagram showing the geochronological evolution of Rengali Province.

List of Tables *(All the tables are attached at the end of respective chapters)*

- 5.1 Mineralogy of the studied rock types from Central Gneissic Belt and low-grade supracrustals.
- 5.2 Representative chemical composition of minerals present in charnockite sample.
- 5.3 Representative chemical composition of minerals present in migmatitic hornblende gneiss sample.
- 5.4 Representative chemical composition of minerals present in migmatitic hornblende gneiss sample.
- 5.5 Representative chemical composition of minerals present in mafic granulite sample.
- 5.6 Representative chemical composition of minerals present in mafic granulite sample.
- 5.7 Representative chemical composition of minerals present in calc-silicate granofels sample.
- 5.8 Representative chemical composition of minerals present in amphibolite sample.
- 5.9 Representative chemical composition of minerals present in meta-gabbro sample.
- 5.10 Representative chemical composition of minerals present in meta-dolerite sample.
- 5.11 Summary of pressure-temperature estimates from the studied high-grade rocks of the Central Gneissic Belt.
- 6.1 Major, trace and REE analytical data from representative samples of the Central Gneissic.
- 7.1 Summary of the samples collected from Central Gneissic Belt and supracrustal units for geochronological study.
- 7.2 Ion microprobe data of the analysed zircons from the samples of Rengali Province.
- 7.3 Electron microprobe data of analysed monazite grains with calculated spot ages from fibrolite schist and leucogranite sample.
